
DOMESTIC AIRLINE FARES CONSUMER REPORT

Third Quarter 1999 Passenger and Fare Information

May, 2000

U.S. Department of Transportation

FARE INFORMATION FOR CONSUMERS

Each month the Department of Transportation releases an Air Travel Consumer Report that includes information about various service quality elements, including flight delays, mishandled baggage, and oversales, and a variety of other types of consumer complaints.

In response to an increasing number of inquiries from consumers about domestic airline prices the Department decided to release a quarterly fare report. The first such report, for the third quarter of 1996, was released in June 1997. This is the thirteenth report, and is based on data for the third quarter of 1999.

The initial report provided information about average prices being paid by consumers in the 1,000 largest domestic city-pair markets within the 48 contiguous states. These markets account for about 75 percent of all 48-state passengers and 70 percent of total domestic passengers. This report includes the top 1,000 city-pair markets for the fourth quarter of 1998, plus 241 additional city pairs that have been in the top 1,000 during previous quarters covered by this report series.

Tables 1 through 5 contain the same information as previous reports. As with the other reports, a special feature has been included to provide more in-depth analysis of the effect of low-fare service on fares.

For each market, Table 1 lists the number of one-way passenger trips per day, the nonstop distance, the average market fare, and identifies the airlines with the largest market share and the lowest average fare; market share and average fares are provided for both airlines. Average fares are average prices paid by all fare paying passengers. They therefore cover first class fares paid to carriers offering such service but do not cover free tickets, such as those awarded by carriers offering frequent flyer programs.

Airlines tend to offer a wide variety of prices in any given market and it is unlikely that the average fares from this report will be the same as any particular fare offered. Nevertheless, information about average fares charged, including fares charged by dominant carriers and lower-cost competing carriers where available, can provide useful consumer information. Also, fare comparisons between markets allow consumers to further evaluate prices.

In particular, a high average fare in a market is an indication that a broad range of fares is available and that the number of seats sold at low fares are likely to be both very limited and subject to various travel restrictions. In such markets travelers must make extra efforts to get the lowest price for the service they want. Advice laid out in the fact sheet prepared by the Department's Aviation Consumer Protection Division—*Getting the Best Air Fare*—will help consumers accomplish this. This fact sheet can be obtained by requesting a copy at (202) 366-2220 or via the World Wide Web at:
<http://www.dot.gov/ost/ogc/subject/consumer/aviation/publications/bestfare.html>.

To assist consumers in making average fare comparisons, Table 1 segregates markets by mileage block, since distance is a major factor that affects the level of prices charged.

Markets are then sorted within each mileage block by fare amount, from the highest average fare to the lowest. Consumers should understand that because carriers tend to offer a variety of prices in a market, carriers with higher average prices might offer some seats at prices as low as, or even lower than, carriers with much lower average prices.

The information contained in Table 1 reveals that in many markets the average fares are quite different from carrier-to-carrier. In some instances this reflects differences in service, such as connecting versus nonstop service, or service to different area airports. Note that the “lowest fare carrier” is the carrier with the lowest average fare that has at least a 10 percent share of the traffic in the market, except for markets where only a single carrier has a 10 percent or greater share. In such markets the carrier with the lowest average fare is identified even if its market share is less than 10 percent. In some markets the “market average” fare will be lower than the fare for the ‘lowest fare carrier’ because several carriers that do not individually account for a 10 percent share can collectively account for a significant share. Often they charge lower average fares than individual carriers with greater market participation.

In Table 2, the data are summarized by city. The information provided includes the number of city-pair markets in the top 1,000+ that involve each city (e.g., 10 for Burbank), the number of passengers traveling to and from each city, the average fare, average fare per mile (yield), and average distance traveled. The data are sorted by distance.

Data are provided for markets that experienced changes in average fares of more than 30 percent compared with one year ago. Markets with large increases are shown in Table 3 and markets with large decreases are shown in Table 4. Each market’s average fare and total passenger count are provided, along with the absolute and percent change in both average fares and passengers.

Table 5 provides detailed fare information for short-haul, high-fare markets. For a more complete explanation, please read the introductory information at the beginning of Table 5 itself.

This quarter's special feature examines city-pairs that have moved into the top-1000 ranking since the first quarter of 1998.

Footnotes and a key for carrier codes used in this report can be found at the end of the report. This report is also available at <http://ostpxweb.dot.gov/aviation>. Telephone inquiries should be referred to (202) 366-1032.

Table 5 (abridged):
Detailed Fare Information for Highest- and Lowest-Fare Markets Under 750 Miles

As discussed earlier in this report, airlines offer a wide variety of prices in any given market, and it is unlikely that the average fares listed in this report will match any particular fare being offered. A high average fare usually indicates that a broad range of fares is offered in the market. It is likely that low fare seats in these markets are offered in limited numbers, and are subject to various travel restrictions. Fares in markets with low average fares tend to be clustered closely around the average fare. Because only a small percentage of passengers in these markets pay high fares, it is much easier for consumers to find competitive prices. In markets with high average fares, consumers must make extra efforts to get low price service.

The attached table shows detailed fare and passenger data for all city-pairs with a stage length of less than 750 miles that have average fares above \$200. Fare and passenger information is provided for individual competitors in the market. Any airline that carries ten percent or more of the passengers in a market is considered a competitor for the purpose of this report. Following the high-fare markets, identical information is provided for city-pairs with a stage length of less than 750 miles that have an average fare of \$60 or less.

The markets covered in Table 5 were limited in this manner for the sake of brevity. The 750-mile stage length was chosen for demonstrative purposes, because a greater percentage of passengers are affected by fare disparities in short-haul markets with high average fares. The same data for all markets covered in this report can be found on the Internet at <http://ostpxweb.dot.gov/aviation> under "What's Hot."

For each competitor in the market, the table shows the number of passengers carried, the competitor's market share, and the competitor's average fare. To demonstrate the various levels of fares within these markets, we show the least and most expensive \$25 fare interval available to at least five percent of passengers in the market, along with the percentage of the competitor's passengers that flew in those fare intervals. The fare listed is the top of the \$25 fare increment. The last column shows the percentage of each competitor's traffic that flew at fares greater than three times the least expensive significant fare interval.

For example, American Airlines flew 15,820 passengers between Chicago and White Plains, NY, or 35% of market passengers, at an average fare of \$327. American's *Minimum \$25 Fare Interval* between Chicago and White Plains, NY is \$150; the percent of passengers in that interval was twelve percent. This means that twelve percent of American's passengers in this market paid between \$126 and \$150 each way. The \$126 to \$150 fare interval was the lowest in which at least five percent of American's passengers flew. American's *Maximum \$25 Fare Interval* is listed as \$575; the percentage of passengers in that interval was nine percent. This means that nine percent of American's Chicago-White Plains passengers paid between \$551 and \$575 each way. The

\$551 to \$575 fare interval was the highest in which at least five percent of American's passengers flew. Twenty-seven percent of American's passengers paid more than \$450 each way (three times \$150, the top of the lowest significant fare interval for American in this market).

Special Feature

New Top-1,000 City-Pair Markets

Each quarter as new markets move into the top 1,000 the list of markets covered by this report grows. Once a city-pair is ranked within the top 1,000 it becomes a permanent addition to the data presented. We have done this to provide users of the data with continuity when tracking fare or traffic data in specific markets. In this quarter's Domestic Airline Fares Consumer Report, 1241 city-pairs are listed.

One reason that some city-pairs move into (and out of) the top 1,000 is seasonality. Nantucket- New York City provides one such example. In the third quarter of 1999, traffic on seasonal flights between the two points was extensive enough to move the market into the 944th spot for that quarter. For the remainder of the year, there was little reported O&D traffic between the two points. There are other markets, however, that move into higher ranking spots on the top-1,000 list and appear there consistently. This special feature examines the 66 city-pairs that have appeared in the list of top-1,000 U.S. domestic markets for the first time since the first quarter of 1998.¹ For each market, traffic and fare data is presented for both this quarter and the same quarter in 1997. City-pairs are listed according to the 3rd quarter 1999 passenger ranking. Also included is information about carriers providing service in city-pairs in the 3rd quarter 1999 that were not in the market in the same quarter of 1997.

- Low-fare carriers entered 37 of 66 markets, or 57% of the newly ranked city-pairs.
- Traffic growth in the markets with no new entrant is due to service increases either by an incumbent network or low-fare carrier.
- Only three of the 66 markets received new service solely from major network carriers. In all three instances, traffic and fares both increased. None of the three markets were ranked within the top-1000 in 3rd quarter 1999.
- Low-fare entry has traditionally centered on dense point-to-point markets. However, Southwest chose Baltimore-Manchester, a small city-pair with only 32 local O&D passengers each day, and turned it into the 91st largest market in the U.S with low fares and plentiful frequencies.
- With few exceptions, traffic growth in the most successful of the newly-ranked city-pairs was stimulated by large fare declines. Southwest and Airtran are the new entrants that appear most frequently in city-pairs with a dramatic rise in passenger O&D ranking.

¹ The first quarter of 1998 was chosen as a benchmark period because it was the first quarter in which new Origin & Destination reporting standards were implemented.

Data Source:

Origin and Destination Survey of Airline Passengers submitted by certificated airlines. A ten- percent sample of passenger tickets. Information in this report extracted from DB1B, using directional components of domestic itineraries (fared passengers only).

1/ Limited to carriers with a 10 percent or greater share of the market. In markets where only a single carrier has a 10 percent or greater share we have shown the lowest fare for any carrier that accounts for one percent of more of total traffic.

2/ Airlines tend to offer a wide variety of fares in any given market. Carriers with higher average prices may offer some seats at prices as low as, or even lower, than carriers with much lower average prices.

3/ Average fare per mile computed by dividing the average fare by the average passenger trip length.
